

October 1, 2026

At Avista, we're committed to helping businesses reduce energy costs and improve efficiency. Each year, we review our **commercial lighting energy efficiency program** to ensure incentives remain aligned with market conditions, customer needs, and energy-saving opportunities.

As a result of our annual review, some incentive amounts are changing for the 2027 program year.

Please note: This notice applies only to commercial lighting incentive offerings. Updates for other programs, including residential, midstream, and natural gas offerings, will be announced separately.

If you'd like your lighting project to qualify for current program incentives, please ensure:

- Your lighting is fully installed and operational by **December 31, 2026**
- All required documentation is submitted by **December 31, 2026**, including:
 - Completed incentive application or agreement
 - Final invoices
 - Any required supporting documentation

Applications received in 2026 will not be held for 2027 incentive levels and will be processed using the incentives in effect at the time of application.

Looking Beyond Prescriptive Rebates?

Some larger, more complex, or unique commercial lighting projects may not qualify for standard prescriptive incentives. However, these projects may still be eligible for incentives through Avista's **Site-Specific Program**. If you're unsure which program is the best fit, contact your [Account Executive](#) before moving forward. Our team can help identify available opportunities and maximize potential incentives.

Additional Ways We Can Help

Eligible Washington small business customers may finance qualifying energy efficiency improvements through our **Energy-Smart Loan Program**. Financing is available for projects ranging from \$5,000 to \$75,000, with convenient repayment through your Avista bill.
