

Sometimes, less is more.

One way to achieve a more sustainable energy future is to use less energy. It's why we teach customers how to save energy and reward them for adopting energy-efficiency measures.

AVISTA[®]

**Together,
we'll power
the future.**

In support of conservation targets set by Washington's Energy Independence Act (Voter Initiative 937) in 2006, Avista and our Washington customers continue to demonstrate impressive energy-saving progress.

In addition to improvements we've made to our energy delivery system, we want to thank our many customers who used our energy-saving rebate and incentive programs to improve the energy efficiency of their homes and businesses.

Together, we saved over 84,827 megawatts of electricity and 1,263,481 therms of natural gas between 2022 and 2023. That's enough energy to power 7,480 electric homes and 1,595 natural gas homes for an entire year!

Let's keep up the great work!

These conservation savings were reviewed and approved by the Washington Utilities and Transportation Commission on January 31, 2025 (natural gas) and February 7, 2025 (electric).
